

Soma Veszelszki

Senior Full-Stack Software Engineer with 8 years of experience building and **owning product features** end-to-end in fast-paced startup environments.

Experienced in delivering customer-facing functionality, improving system performance and reliability, and collaborating closely with product, design, and US-based teams.

Strong focus on maintainable code, pragmatic architecture, and shipping high-quality features that **create real user value**.

EXPERIENCE

[Tulip Interfaces](#) / no-code MES app builder (USA, Hungary) *Senior Full-Stack Engineer* [TypeScript, React, Mongo]

AUG 2023 - NOW

- Implemented a **no-code service integration platform** enabling customers to connect external systems via HTTP, SQL, MQTT, and OPC UA with multiple **authentication strategies**
- Delivered performance improvements for our request executor service, reducing its **RAM usage by 85%** and improving reliability for customer workflows
- **Owned large-scale customer-impacting project** with multiple high-risk database migrations, coordinating rollout and shipping without incidents or downtime
- Acted as a **technical representative** for the team in organization-wide technical discussions, influencing architectural decisions
- **Mentored** junior and mid-level engineers, contributing to onboarding, code quality, and team velocity

[Maverick Derivatives](#) / trading company (Netherlands) *Backend Engineer* [C++]

MAY 2021 - JAN 2023

- Built a trading server from scratch managing **200k instruments**, responsible for **30% of all company trades** in the domain
- Took **full ownership** of a latency-sensitive quoting service, including development, deployment, monitoring, and on-call incident response
- **Collaborated closely with traders** and stakeholders to translate business requirements into reliable, production-grade systems

[aiMotive](#) / self-driving startup (Hungary) *Software Engineer* [C, C++]

JUL 2017 - APR 2021

- Built a media ingestion and storage system processing **100+ GB of video data per day**, supporting internal tooling and analysis workflows
- Refactored the software-to-vehicle interface to support **4 car platforms**, improving maintainability and developer experience

EDUCATION

Budapest University of Technology and Economics

Electrical Engineering

Master's Degree (summa cum laude)

SEP 2014 - JAN 2021

SIDE PROJECT

[Babocar](#) [C++, Node.js, React]

Complete hardware and software for a **self-driving model car**.

It holds the all-time [lap record](#) at the RoboAut autonomous car race.

TECHNOLOGIES

TypeScript, C/C++, Node.js, React, Boost
Jest, Playwright, Cypress, GTest, GMock
MongoDB, PostgreSQL, Redis
Microservices, APIs, Google Protobuf
Docker, Kubernetes, AWS
GitHub Actions, Ansible
GitHub Copilot, Cline

SKILLS

Enthusiastic proactiveness
Autonomy and ownership
Quick understanding of new concepts
Effective communication

LANGUAGES

English (proficient)
Hungarian (native)
